

## OBSERVATION LOG

## OBSERVATION

[illegible]

**Think like a scientist—observe, ask questions, and take notes!**

**Colours:** Can you see any colour changes as they grow? Are they clear, white, or a different shade?

**Types of Movement:** Are they floating, darting, wiggling, or swimming in circles?

**Water Clarity:** Is the water staying clean, or is it getting cloudy over time?

**Size Changes:** Are your Sea-Monkeys getting bigger each day? Can you spot tiny babies and larger ones too?

**Swimming Style:** Do they swim in a straight line or loop around? Upside down or right way up?

**General Behaviour:** Are they hanging out near the light? Do they group together or spread out?

**Anything else that takes your fancy!** – Maybe they respond to light or move more at certain times?
